Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small content of the specific or some content of the sequence of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Lactor Caenorhabditis elegans.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Direct Submission
Submitted (27-OCT-1999) Nematode Sequencing Project, Sanger Centre, Hinxton, Cambridge CB10 1RQ, UK and Department of Genetics, Washington University, St. Louis, MO 63110, USA. E-mail: jes@sanger.ac.uk or rw@nematode.wustl.edu
On Oct 19, 1999 this sequence version replaced gi:6016917.
Order of segments is not known; 800 n's separate segments.
IMPORTANT: This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Caenorhabditis elegans.
Caenorhabditis elegans
Caenorhabditis elegans
Eukaryota; Metazoa; Nematoda; Secernentea; Rhabditia; Rhabditida;
Rhabditina; Rhabditoidea; Rhabditidae; Peloderinae; Caenorhabditis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gtgataatatcacaaattataccttgtattgcccaatttttatgggcatcatttcctatt 1701
                                                                                                                                                                                                                                                                                                                                                                          IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone Y18D10A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           bin/display?ab=wormace&class=Sequence &object=Y18D10A Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (17-DEC-1998) Louis, MO 63110, USA. E-mail: jes@sanger.ac.uk or rw@nematode.wustl.edu On Nov 21, 1998 this sequence version replaced gi:3873430. On Nov 21, 1998 this sequence version replaced gi:3873430. On Nov 21, 1998 this sequence version to replace gi:3873430. On The sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  bin/display?db-wormace&class=Sequence &object=Y111B2D
Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

EXCEPTIANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone Y111B2D. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between the secure we arrange for a small overlap between the secure we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Coding sequences below are predicted from computer analysis, using predictions from Genefinder (P. Green, U. Washington), and other

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC frist sequence corresponds to the genomic sequence encoding a Plasmodium flat sequence was isolated by screening a protein (W24790). The gene sequence was isolated by screening a protein (W24790). The gene sequence was isolated by screening a protein (W24790). The gene sequence was isolated by screening a protein (W24790). The gene sequence were from a missionary treated by prophylaxis (for strain 76/96 see FR9101286). Of 20 clones isolated, clone 729s was used to screen a library generated from Thai strain K1. One clone contained a 6.85 kb insert including the sequence presented here. The gene organisation comprises a first exon, a short of the prophylaxis of the second exon containing a 1.8 kb region encoding to be intron and a 5 kb second exon containing a 1.8 kb region encoding corresponding to a glycosyl-phosphatidylinositol membrane anchoring sequence. The invention relates to new polypeptides of at least 10 amino acids derived from the LSA-3 polypeptide with the exception of peptides w24791-4. The LSA-3 peptides can be used to raise antibodies and as vaccines for immunotherapy of malaria.

PT Claim 4; Page 56-61; 96pp; English.

CC This sequence represents the var-7 gene of Plasmodium. Var-7 belongs to the Duffy binding like (DBL) family of genes which have homology to the CC the Duffy binding like (DBL) family of genes which have homology to the CC Buffy antigen binding protein (DABP) and sialls acid binding protein (CC (SABP) conserved regions (see T72889 and T72888 respectively). The var CC family of genes modulate cytoadherence and antigenic variation of CC Plasmodium infected erythrocytes. SABP and the Duffy antigen binding CC protein (DABP) are soluble proteins that appear in the culture CC supernatant after infected erythrocytes release merozoites. DABP and SABP CC mediate the binding of merozoites and schizonts to the erythrocyte ccurface. These proteins are necessary for erythrocyte invasion by the CC parasite. This sequence can be used in the compositions of the invention.

The compositions are for the treatment and prevention of malaria, and

Plasmodium var-7 gene.
Plasmodium var-7 gene.
DBL gene family; SABP; sialic acid binding protein; vaccine; therapy;
Duffy binding like gene; Duffy antigen binding protein; erythrocyte;
DABP; merozoite; malaria; var-1; var-2; var-3; var-7; immune response

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OB-OCT-1997 (first entry)

P. falciparum liver stage antigen-3 genomic sequence.

Plasmodium falciparum; pre-erythrocyte; liver stage antigen; serum;

prophylaxis; Thai strain; gene organisation; exon; intron; hydrophob
glycosyl-phosphatidylinositol membrane anchoring sequence; antibody;

vaccine; immunotherapy; malaria; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  var-1, var-2, var-3 or var-7 genes of the DBL gene family, a family genes having homology with conserved regions of DABP and SABP. The compositions are used for the treatment and prevention of malaria. I are also used in the preparation of vaccines for inducing a protecti immune response in a mammal to plasmodium merozoites (especially plasmodium falciparum or Plasmodium vivax).

Claim 15; Fig 1; 90pp; English.
CThe sequence of Ddy2 has been found to contain the putative open creading frame indicated in the Features Table. The possible ORF is C flanked by regions with similarity to promoter and poly adenylation CC signals of known Dictyostellum genes. The RNA and polypeptide product of the Rep gene have not, however, been detected. It is C believed that the product is produced in low amounts to positively CC regulate initiation of plasmid replication. The polypeptide may also contain regions that act as negative regulators of plasmid copy CC contain see also Q11711 and Q11712.

The cDNA encodes a protein that includes 2 insert sequences not found in other CPSII proteins. The first separates the putative structural subdomain and the glutaminase subdomain of the glutamine-amidotransferase subunit of CPSII, while the second separates 2 ATP binding subdomains of the CPSII subunit, CPSa and CPSb.

The encoded peptide (see P90417) is useful in a protective vaccine, esp. against malaria. Produced antibodies are useful for passive immunisation, and antibodies, the protein and the DNA sequence are useful as diagnostic reagents. See also N90211-25 and P90403-19.

                                                                                                                                                                                                                                                                                     A polypeptide comprising a Plasmodium falciparum (Pf) erythrocyte membrane protein 1 (PfEMPI) or active fragments or analogues of that protein can be used in the treatment or prevention of symptoms of a malaria parasite infection. The polypeptides can inhibit, block or reverse the sequestration of erythrocytes in patients suffering from malaria. Nucleic acids derived from the PfEMPI gene can be used as probes and primers to identify a Plasmodium falciparum parasite, the primers used to generate characteristic amplification patterns from different P. falciparum strains. Antibodies specifically immunoreactive with the PfEMPI polypeptide or its fragments may be used in diagnosis of malaria infection. This sequence encodes the pfEMPI protein of the MC type of Plasmodium falciparum. An

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                         Claim 7; Page 59-60; 849p; English.

Human apolipoprotein B (apoB) scaffold attachment region (SAR) element clones Rh32 (T31530) and Rh10 (T31531) respectively carry the 3' human apoB SAR element and the distal 1212 bp 5' human apoB SAR element and the distal 1212 bp 5' human apoB SAR elements of the human apoB gene chromatin domain. A novel recombinant DNA molecule adapted for transfection of a host cell comprises an erythropoletin (EPO) cDNA (T31529) or genomic clone (T31532) operably linked to an expression control sequence and to the 5' and 3' SAR elements. The SAR elements increase expression of the recombinant EPO in stable, long-term mammalian cell cultures.

PT binding proteins

SC claim 4; Page 56-61; 96pp; English.

CC This sequence represents the var-7 gene of plasmodium. Var-7 belongs to the Duffy binding like (DBL) family of genes which have homology to the CC the Duffy binding like (DBL) family of genes which have homology to the CC the Duffy binding like (DBL) family of genes which have homology to the CC plasmodium infected erythrocytes. SABP and T72888 respectively). The var CC family of genes modulate cytoadherence and antigenic variation of CC plasmodium infected erythrocytes. SABP and the Duffy antigen binding CC protein (DABP) are soluble proteins that appear in the culture CC supernatant after infected erythrocytes release merozoites. DABP and SABP CC compositions are for the treatment and prevention of malaria, and CC compositions are for the treatment and prevention of malaria, and CC compositions are nocleotide sequence or encoded polypeptide of the CC var-1, var-2, var-3 or var-7 genes of the DBL gene family, a family of genes having homology with conserved regions of DABP and SABP. The CC compositions are used for the treatment and prevention of malaria. They care also used in the preparation of vaccines for inducing a protective immune response in a mammal to plasmodium merozoites (especially CC plasmodium falciparum or plasmodium vivax).

DNA coding for Plasmodium falciparum DNA coding for Plasmodium falciparum antigenicity (
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 4; Fig 1; 55pp; English.

The inventors claim a novel DNA molecule which comprises a nucleotide sequence corresp, to all or a portion of the base sequence coding RESA (N60472) or FIRA (N60473). RESA and FIRA lantigenicity suitable for providing protective immunity against plasmodium falciparum malarial infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The inventors claim a novel DNA molecule which comprises a nucleotide sequence corresp. to all or a portion of the base sequence coding RESA (N60472) or FIRA (N60473). RESA and FIRA have antigenicity suitable for providing protective immunity against plasmodium falciparum malarial infections.

                                                                                                                                                                                       1406
                                                                                                                                                                                                                                      V68900 to V68998 represent nucleotide sequences which encode human breast tumour specific polypeptides. Detection or measurement of human breast tumour specific polypeptides and nucleotide sequences, or the corresponding RNA in a sample, is used for diagnosis and monitoring of breast cancer. Human breast tumour specific polypeptides and nucleotide sequences, and the vectors containing the DNAs, are a useful in vaccines for inhibiting development (for prevention or therapy) of breast cancer. The polypeptides may also be used to raise monoclonal antibodies, used as immunoassay reagents. Sequence 715 BP; 183 A; 131 C; 86 G; 294 T;

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB
